

Making a Star Rating Meter

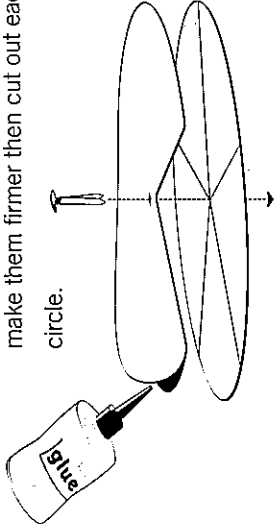

A Star Rating Meter is a tool that can be used when you are at the river site to help you conduct a habitat survey.

You will need:

- 1 split pin
- Glue
- Coloured pencils
- Scissors
- Thin cardboard
- A photocopy of the Star Rating Meter template

Step 1

Paste the two circles onto thin card to make them firmer then cut out each circle.

Step 2

- Place the turning circle with the cut out section on top of the circle that details all the factors.
- Use a sharp object such as scissors or a compass to punch a hole in the centre of the circles.
- Secure the circles together with a split pin folded back on the under side.
